Here are 3 Steps to find out which Paper Straws suit you:

1. By Beverage Type

Beverage Type	Diameter	Length
Water, Milk, Soda, Iced Tea, Cocktails, Mocktail, etc.	6mm	5.75". Best for shorter glasses, cans or tetra packs
	6mm	7.75". Best for Regular Cups or Glasses
	6mm	10.25". Best for Taller Cups, Glasses or Bottles
Milkshakes, Smoothies, etc	8mm	7.75". Best for Regular Cups or Glasses
	8mm	10.25". Best for Taller Cups, Glasses or Bottles
Bubble Tea	10mm	10.25". Best for Taller Cups, Glasses or Bottles

2. By Packing Type

	Wrapped Paper Straws	Unwrapped Paper Straws
Purpose	More hygienic way of offering paper straws. Each straw is individually machine wrapped in paper. Can be given by hand since the customer is required to remove the wrapper before starting to sip.	Good for self consumption or storing in paper straw dispensers.
Cost	Marginally higher than unwrapped paper straws	
Storage/Case Quantity	Lower than unwrapped paper straws	

3. By Color Options

Color/Pattern	Use Case
Solid White or Black	Ideal for Hotels, Restaurants, Bars, Nightclubs, Casinos and Resorts. The neutral color does not impact the branding in any way of the brand.
Stripes	Ideal fo theme based Restaurants, Cafes, Smoothie & Shake Bars, Adventure Parks, etc where the environment is more active and not just sit-down.
Patterns	Ideal for Parties and Theme Based events like Birthday Parties and social get togethers
Custom Branded	Your own brand name and/or logo ideal for give aways, promotions

7 Reasons to Buy Paper Straws

Paper Straws / July 26, 2018 / cb7

Paper Straws were first introduced in the 1800s and then modified over decades but finally given up since plastic straws were sturdier, cheaper and quick to produce. With an increase in population and growing demand for straws, people from across the world have realized how dangerous plastic straws actually are – especially because they add to landfills and clog our oceans causing a severe threat to marine life.

Here, we can give you 7 Top Reasons to Stop Using Plastic Straws and start using Paper Straws instead:

1. **100% Biodegradable & Compostable:** Paper Straws are made of a natural fibre i.e Natural Recycled Paper which is 100% Biodegradable and Compostable in the right compost setting. Most Plastic Straws are not recyclable and are simply dumped into landfills or oceans.
2. **Made from FDA approved material:** The glue and ink used in Paper Straws is made from FDA approved materials ensuring that Paper Straws are food grade quality.
3. **Safety:** Paper being a softer material cannot cause damage or harm unlike plastic which is harder and sharper. It does not include any harmful dyes and coloring agents and can be served with both hot and cold beverages.
4. **Cheaper than Steel:** Stainless Steel Straws or Reusable Straws are a good alternative to plastic straws but often cost a lot more than Paper Straws.
5. **Different Shapes & Sizes:** Paper Straws are available in all lengths and thickness for multiple beverage purposes.
6. **Colorful Party Straws:** With a variety of prints, patterns and color options – Paper Straws are the perfect addition to your party.
7. **Renewable Resources:** Paper Straws are made from renewable resources like paper a natural fibre, adhesives made from soy/vegetable oil and food grade ink used in printing.

One of the key reasons to not use Plastic Straws is that it is harmful to the environment and pollutes marine life. With an increase in awareness about the quantum of pollution plastic straws cause on platforms like social media, people are now more and more cautious about not using single use items like plastic straws. A video of a [Sea Turtle with a Straw in it's nostril](#) went viral a
